

RYAN DENMARK

Backend Software Engineer | Java & SQL | Data Pipelines & API Integrations
Eagan, MN • ryanwdenmark@gmail.com • (651) 497-9878 • linkedin.com/in/rwdenmark

PROFESSIONAL SUMMARY

Backend engineer with 7+ years on cross-functional teams, building production data pipelines and HIPAA-regulated partner integrations that move high-volume data between partner systems and our platform. Comfortable shipping under audit pressure, with strict data formats and partner inputs that arrive incomplete or unexpected. A feature isn't done until it's shipped, monitored, and stable in production.

TECHNICAL SKILLS

Tech Stack: Java, Spring Boot, MySQL, REST APIs, XML, JSON

Tooling & Cloud: IntelliJ IDEA, Git, GitHub, Gradle, Postman, Microsoft Azure, GitHub Copilot, Anthropic Claude

Data & Architecture: multi-stage scheduled-job pipelines, entity matching/resolution, schema translation, relational databases, partner integrations (X12 EDI, file feeds, REST APIs), high-volume transactional data movement

Standards & Compliance: HIPAA and X12 EDI transactions covering 837 (Claims), 835 (Remittance), 270/271 (Eligibility/Status), 834 (Enrollment), 277CA (Claims Acknowledgement), 999 (Functional Acknowledgement)

Engineering Practice: Ownership from design through production. Code review and mentorship. Works with PM, BA, and dev teams. AI-assisted development for daily code generation, review, and debugging. On-call for production incidents

PROFESSIONAL EXPERIENCE

Smart Data Solutions, Eagan, MN

Feb 2019 – May 2026

Healthcare claims processing and payer integration platform

Software Engineer II, Implementation

Dec 2024 – May 2026

- Lead engineer, mentoring junior developers and reviewing code across the wider development team.
- Built shared base classes for commonly duplicated client logic like mapping, validation, and routing, so new implementations could extend proven code instead of re-implementing it.
- Diagnosed a defect in an abstract class affecting roughly 15% of the client base and drove the fix to production, restoring a critical processing queue and retiring a manual dashboard workaround.
- Owned the most heavily customized client implementations, those with non-standard partner integrations outside the platform's standard workflow, and delivered them on schedule and stable in production.
- Led design reviews on complex and high-value engagements to catch scope and technical risks before kickoff.

Software Engineer I, Implementation

Apr 2021 – Dec 2024

- Delivered over 25 client implementations from requirements through go-live.
- Designed and built data processing pipelines as a series of separately scheduled jobs (import → parse → validate → export → transport) handling thousands of transactions per client per day.
- Implemented bidirectional partner data routing for over 30 partners through mixed protocols (X12 EDI, REST APIs, custom flat-file formats), extending existing platform workflows.
- Developed entity-matching logic to reconcile records across multiple client sources.
- Shipped HIPAA-regulated integrations across the X12 EDI transaction set (837, 835, 270/271, 834, 277CA, 999). Implementations passed HITRUST and SOC 2 audits across 7 years with no findings in code I owned.

Account Management Programmer

Feb 2019 – Apr 2021

- Resolved support tickets and delivered change requests and small projects for existing client accounts.
- Mentored new hires through paired shadowing.

Beyond Impact, Infrastructure Support Specialist

May 2017 – Jan 2019

- Supported client Azure environments, including provisioning, networking, and production on-call.

EDUCATION

Bachelor of Science, Computer Science (Minor in Mathematics), Bemidji State University, Bemidji, MN

May 2017
